BIOCHEMISTRY (Blood - continued)

Apolipoprotein A1 result: 1.5 g/L
Reference values: 1.10 - 2.05 g/L

Please note: reference range updated by referral laboratory.
An update to our laboratory system is in hand.
On this occasion, please interpret the reported result with
reference interval written directly below the result.

Apolipoprotein B	1.14	(0.66-1.33) g/L
Lipoprotein (a)	38	< 75 nmol/L

A continuous relationship exists between Lp(a) concentration and risk of atherosclerotic cardiovascular disease (ASCVD). An elevated result should be interpreted in the context of other risk factors and absolute global ASCVD risk, as standard risk measures (e.g. QRISK3) do not take Lp(a) into account.

Suggested adult risk thresholds from European Atherosclerosis Society consensus statement (Eur Heart J 2022;43:3925-46):

<75 nmol/L	Rules out increased ASCVD risk attributable to Lp(a)
75 - 125 nmol/L	'Grey' zone. Consider presence of other risk factors and risk stratify including Lp(a) concentration
>125 nmol/L	Rules in increased ASCVD risk attributable to Lp(a)

In children, an Lp(a) >75 nmol/L is associated with

increased risk of arterial ischaemic stroke.

The consensus statement recommends that patients with an elevated Lp(a) and a higher risk of ASCVD should be offered specialist lipid review.

Lp(a) determined on Roche Generation 2 Lp(a) assay.
